1. CITY DATA

1.1. How to access

City Data can be accessed in the Databases section of the MarketLine Advantage homepage:

Once you're on the Databases section click "City Data" to be automatically directed to the City Data 'Home' page.

Here, you will find a map showing our global coverage, links to each of our dashboards where you can access different indicators according to each theme, as well as our featured Insight Framework

of the month.

[Home](#) [Overview](#) [Economic](#) [Demographic](#) [Household](#) [Labor](#) [Insight Framework](#) [Latest data](#) [Data download](#)

A database of over 2,000 urban areas globally

Welcome to Cities

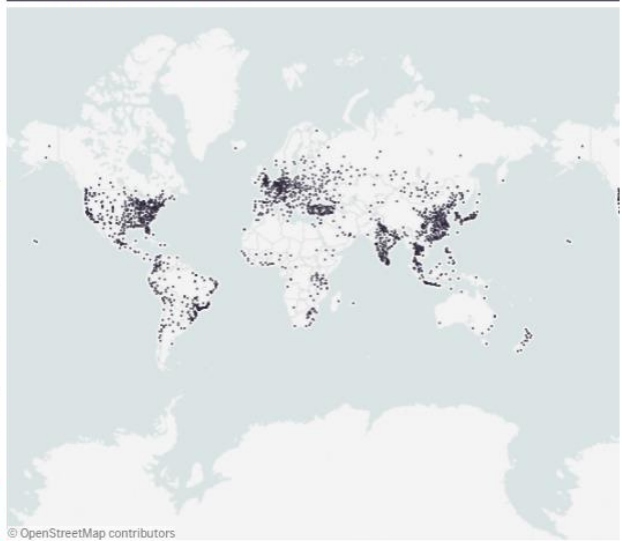

As of 2008, over 50% of the world's population lived in urban areas. As the center of economic gravity continues to shift towards cities, our complete Cities database ensures that you are equipped to respond.

Access our dashboards using the links below.

- >> Global overview
- >> Economic analysis
- >> Demographic analysis
- >> Household analysis
- >> Labor analysis
- >> Latest data releases
- >> Insight framework: Visualize the world's aging population

City coverage

Hover over map points to see city names

2. OVERVIEW DASHBOARD

Once on the 'Overview' page you will find top level indicators visualized geographically, with a supporting data table.

- In order to quickly find data for your geographical preference, you will find the geographic filters 'Region', 'Country' and 'City' along the left hand side bar. You can select single or multiple geographies at any one time
- Using the 'Indicator' and 'Year' filters, you can find data on close to 30 indicators for your year of choice
- You will also find city category filters, which allow data selections to be filtered by size of a city's population or economy

When you have made your selections, e.g. 'East Asia & Pacific' as per below, click 'Apply'

Copyright GlobalData. Information is taken from the GlobalData Cities database and sourced from National, International, and Regional Statistics Offices, and GlobalData analysis.

Once you have clicked 'Apply', you will see the chart, legend and side bar will update accordingly.

Additional features:

- If you hover over any data point with the cursor, this will show more information for that particular data value
- If you wish to download a map, chart or data point via Tableau Workbook, PDF, data cut or image, you will first need to click on the map, chart or data point which you wish to download, then select the 'Download' button in the bottom right corner of the page and choose the format in which you would like the data to be downloaded. To see the underlying data, it is recommended that you select 'Crosstab'
- To undo your most recent action, click 'Undo'
- To undo all of your actions, click 'Revert'

3. ECONOMIC, DEMOGRAPHIC, AND HOUSEHOLD DASHBOARDS

The layout of the **‘Economic’**, **‘Demographic’**, **‘Household’** and **‘Labor’** dashboards is the same as the **‘Overview’** dashboard seen in the previous section.

Economic dashboard

This dashboard has over 50 indicators to choose from, including GDP and employment sector breakdown

On the bottom half of the dashboard you will find a chart showing the ranking of every city within your selection for your chosen indicator, from 2000 to 2025

Demographic dashboard

The dashboard has over 100 indicators to choose from, including five year age brackets by gender

On the right hand side of the dashboard you will find a population pyramid showing age band breakdown by gender, for 2016 and 2021. This is an aggregation of your selected cities

Along the bottom of the dashboard, population pyramids show the same but by region

Household dashboard

This dashboard has over 20 indicators to choose from, including average household size and mean household income

The top row of charts shows the top 200 cities for your chosen indicator as a bubble chart, and household income distribution aggregated across your selected indicators

Below, the values are mapped geographically for your chosen year

Labor dashboard

This dashboard has 11 indicators to choose from, including employment by sector and labor force participation rate

The top row of charts is fixed to show employment by sector for your chosen year and unemployment rate over time

Below, your chosen indicator is mapped geographically for further analysis

4. INSIGHT FRAMEWORK

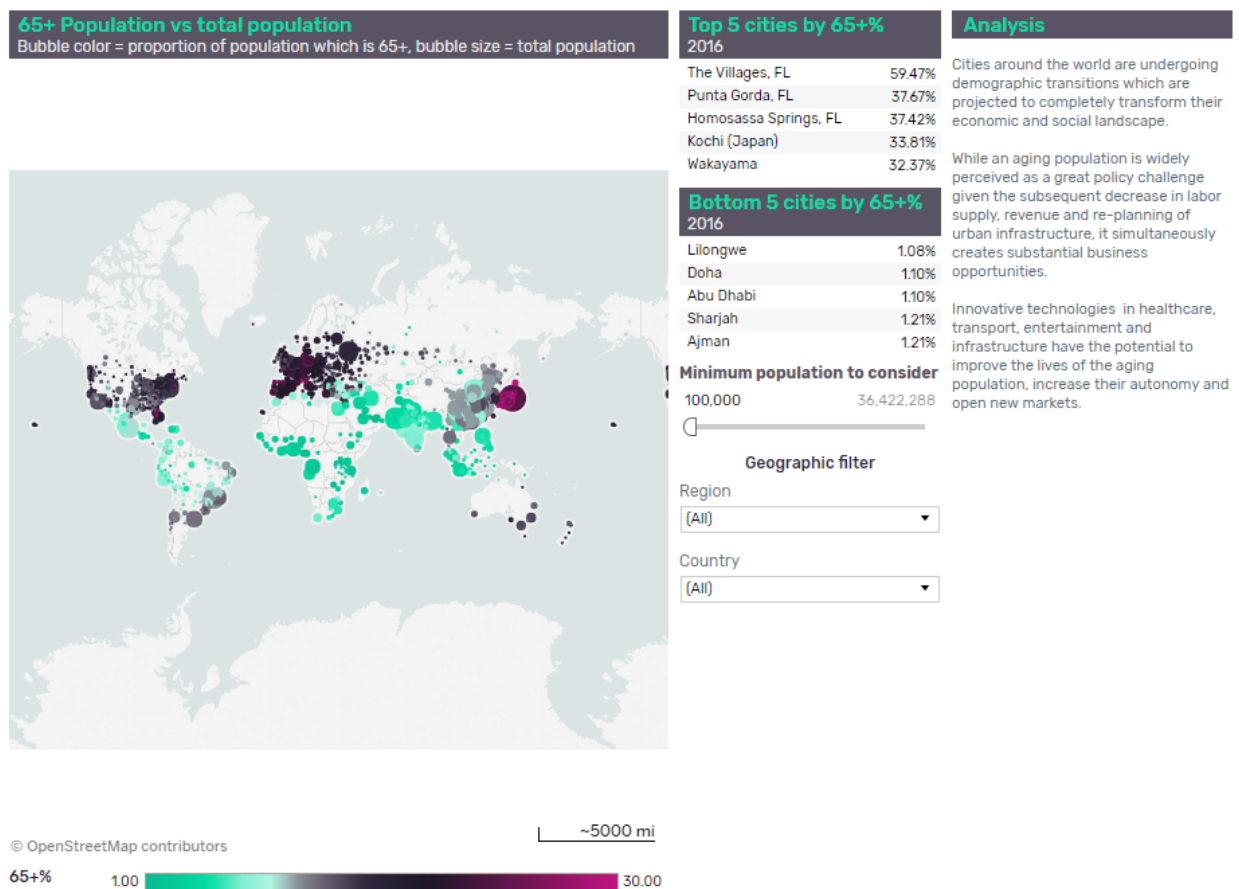

The 'Insight Framework' tab allows you to explore nuances in the data and create your own data story

- Each month, we provide a new chart that presents interesting data in a novel way. For example, June's chart explores the impact of aging populations
- Navigate through each month's chart by clicking through the buttons along the top of the dashboard, or using the arrows directly

Insight framework Monthly charts to reveal insights from our city data.

The impact of growing aging populations

5. LATEST DATA PAGE

As MarketLine is committed to providing clients with the most relevant and up-to-date data available, we will regularly be updating our data set. Clients can visit the **'Latest data'** tab to keep abreast of all the latest data changes we have made.

Home	Overview	Economic	Demographic	Household	Labor	Insight Framework	Latest data	Data download

Latest data

Data release log

With millions of data points on over 2,000 cities around the world, and estimates created to build the most complete cities database in the intelligence market, we continuously provide updates to ensure a high degree of quality and relevance for our clients and their strategy objectives. Updates are largely determined by the availability and official release of data from our vast array of over 200 sources. This may include upgrading estimated values or updates to forecasts based on the latest statistical releases.

Given the linkage of cities within a country, an update of a single city requires an update of all cities within the respective country. See below for all our updates.

Country	Date last updated	Description of changes
India	6 June 2017	Population density update
Canada	23 May 2017	Data updated based on new source data
China	23 May 2017	Shenzhen population updated
Colombia	23 May 2017	Data updated based on new source data
South Africa	23 May 2017	Data updated based on new source data
Brazil	15 May 2017	Data updated based on new source data
United States	15 May 2017	Land area updated
Afghanistan	27 April 2017	Population density and additional growth rates added
Albania	27 April 2017	Population density and additional growth rates added, plus general data update
Algeria	27 April 2017	Population density and additional growth rates added
Angola	27 April 2017	Population density and additional growth rates added
Argentina	27 April 2017	Population density and additional growth rates added
Armenia	27 April 2017	Population density and additional growth rates added
Australia	27 April 2017	Population density and additional growth rates added
Austria	27 April 2017	Population density and additional growth rates added, plus general data update
Azerbaijan	27 April 2017	Population density and additional growth rates added
Bahamas	27 April 2017	Population density and additional growth rates added
Bahrain	27 April 2017	Population density and additional growth rates added
Bangladesh	27 April 2017	Population density and additional growth rates added
Belarus	27 April 2017	Population density and additional growth rates added, plus general data update
Belgium	27 April 2017	Population density and additional growth rates added, plus general data update
Benin	27 April 2017	Population density and additional growth rates added
Bolivia	27 April 2017	Population density and additional growth rates added

Further information

For further information please contact your account manager.

6. DATA DOWNLOAD PAGE

The 'Data Download' dashboard provides the same data available on the other dashboards, but on this page all the indicators are available to select multiple indicators for multiple years. Update the indicator selection as per your preferences using the filters in the left hand side bar, and then download as an Excel file.

Copyright GlobalData. Information is taken from the GlobalData Cities database and sourced from National, International, and Regional Statistics Offices, and GlobalData analysis.

- The data will be shown, along with country and sourcing information in the table to the right
- To download the data click within the table to 'activate' it, navigate to the bottom right of the screen and click on the 'Download' button. From here you can export the data as 'Crosstab' (recommended), PDF, image and so on
- To ensure a swifter user experience, downloads are limited to 50 indicators at a time

7. DEFINITIONS

7.1. Indicator definitions

An extensive list of our indicators and their definitions, and routes to calculation, can be found in the Appendix. A summary is below:

ECONOMY

Economy – Total Nominal GDP

- *Total consumption (or demand) of an economy. Nominal GDP is provided in current market US Dollars (USD), Purchasing Power Parity (PPP), Local Currency (LCU), plus per capita and annual growth values.*

Economy – Total Nominal GVA

- *Total Gross Value Added is a measure of the value of goods and services produced in an area, industry or sector of an economy. Nominal GVA is provided in current market US Dollars (USD), Local Currency (LCU), plus per capita and annual growth values.*

Economy - Agriculture Nominal GVA

- *Total Gross Value Added for the agriculture sector within an economy which includes forestry, hunting, fishing, as well as cultivation of crops and livestock production.*

Economy – Industry Nominal GVA

- *Total Gross Value added for the industry sector includes manufacturing, mining and utilities (mining and quarrying, manufacturing, electricity/metro, gas, steam and air conditioning supply, water supply and waste management) and construction (construction of buildings, civil engineering and other constructions).*

Economy – Services Nominal GVA

- *Total Gross Value added for the services sector includes wholesale and retail trade; accommodation and food services; transport; information and communication (wholesale and retail trade; repair of motor vehicles and motorcycles, transportation and storage, accommodation and good service activities and information and communication); financial intermediation and real estate (financial and insurance activities, real estate activities and professional, scientific and technical activities, administrative and support service activities) public administration; education; health and other services (public administration and defense, compulsory social security, education, human health and social work activities, arts, entertainment and recreation, other service activities, activities of households as employers; undifferentiated goods and services producing activities of households for own use and activities of extraterritorial organizations and bodies).*

Economy - Real GDP - Index (2010 = 100)

- *Real GDP factors in the price-level (or inflation); GDP growth is anchored to a base year to demonstrate growth from a certain period.*

Economy - Prices - Consumer price index (2010 = 100)

- *Consumer price index presents the growth of the average price level for a basket of good used by consumers. Price level growth is anchored to a base year to demonstrate change from historical periods. We specifically look at the annual average CPI rate.*

DEMOGRAPHICS

Demographics - Education – Less than Secondary Education

- *Total population aged 25+ whose highest education attainment level is primary education or less.*

Demographics - Education - Secondary Education

- *Total population aged 25+ whose highest education attainment level is secondary education.*

Demographics - Education structure - Further Education

- *Total population aged 25+ whose highest education attainment level is tertiary education, this includes college, university, technical, masters, PhD etc.*

Demographics - Population

- *Total population of both males and females. Five year age bands (0-4, 5-9, 10-14 etc) are additionally provided.*

Demographics - Population - Male

- *Total population of males. Five year age bands (0-4, 5-9, 10-14 etc) are additionally provided.*

Demographics - Population - Female

- *Total population of females. Five year age bands (0-4, 5-9, 10-14 etc) are additionally provided.*

EMPLOYMENT

Employment - Labor force

- The labor force is the supply of labor available for producing goods and services in an economy. It includes people who are currently employed and people who are unemployed but seeking work as well as first-time job-seekers. In many cases, not everyone who works is included. Unpaid workers, family workers, and students are often omitted, and some countries do not count members of the armed forces.

Employment - Labor Force - Participation rate

- Labor force participation rate is the percent of the working age population (15-64 years) who are in the labor force, meaning they are either employed or actively seeking employment.

Employment - Employment

- Total year-end number of people who are employed within an economy, totaling the agriculture, industry and service sectors.

Employment - Employment - Agriculture

- Total year-end number of people who are employed in the agriculture sector within a city, which includes forestry, hunting, fishing as well as cultivation of crops and livestock production.

Employment - Employment - Industry

- Total year-end number of people who are employed in the industry sector within a city, which includes mining and quarrying, manufacturing, electricity/metro, gas, steam and air conditioning supply, water supply and waste management and construction.

Employment - Employment - Services

- Total year-end number of people who are employed in the service sector within a city, which includes wholesale and retail trade; repair of motor vehicles and motorcycles, transportation and storage, accommodation and food service activities, information and communication, financial and insurance activities, real estate activities, professional, scientific and technical activities, administrative and support service activities, public administration and defense; compulsory social security, education, human health and social work activities, arts, entertainment and recreation, other service activities, activities of households as employers; undifferentiated goods- and services-producing activities of households for own use and activities of extraterritorial organizations and bodies.

Employment - Unemployment

- Total number of people who are not employed within the labor force. This excludes economically active activities such as housework and education.

Employment - Unemployment - Unemployment rate

- Unemployment refers to the share of the labor force that is without work but available for and seeking employment.

HOUSEHOLDS

Households and income - Average household size

- Average number of people living in one household.

Households and income - Total number of households

- "Households" includes all of the occupied housing units in an urban area. A housing unit can include a house, flat, mobile home etc.

Households and income - Household income - Mean household income

- An averaged measure of the combined incomes of all people sharing a particular household or place of residence within the respective year. It includes every form of income, e.g., salaries and wages, retirement income, near cash government transfers like food stamps, and investment gains.

Households and income - Household income - Median household income

- The median income level of the income distribution represents the mid-point at which 50% of households have higher or lower income.

Households and income - Household income – Households by income bracket

- The number of households within a given income bracket. Values are provided in PPP, showing pre-tax income, per annum.

Households and income - Household consumption expenditure

- A measure of the total final consumption expenditure from all households on goods and services.

Households and income - Household consumption expenditure - Expenditure per household

- An average measure of final consumption expenditure by a household on goods and services, measured by the average sum of expenditure of all people occupying a single household.

7.2. Geographical definitions

Due to our process of standardization we cover urban areas of varying sizes. Definitions for what constitutes each are below:

City definition: *The definition of a city can vary depending on the country, but a city is typically a large urban area or an area with a high concentration of human settlement. A city can be categorized depending on the size of the population:*

- *Megacities: Cities with populations of 10 million and more.*
- *Large cities: Cities with populations of between 5 million and less than 10 million.*
- *Medium-sized cities: Cities with populations of between 500,000 and less than 5 million.*
- *Small cities: Cities with populations of less than 500,000.*

Metropolitan area definition: *A metropolitan area is typically defined as a region which consists of a densely populated urban center and the surrounding regions which are connected via transport networks, this includes areas within the direct commuter belt.*

Municipality definition: *A municipality is typically an urban area which has its own local government with local jurisdiction and corporate status.*

Region definition: *A region is often defined as a breakdown or categorization of a country into large areas which have definable boundaries, an example is counties such as West Midlands within the UK, or a country could be split into large general regions such as North and South Island in New Zealand.*

8. METHODOLOGY AND FREQUENTLY ASKED QUESTIONS

8.1. Sourcing, quality and confidence

Q. Where do you collect your data from?

A. National statistic offices are our main source of information, supported by international and regional statistical offices, and international charities, such as UNICEF. Using statistical offices which represent the country, or city, in question ensures access to the best and most up-to-date data available.

Q. How trustworthy is your data?

A. Our credibility is driven by our data sources and our modelling methodology. Official statistics offices can typically be trusted as they are either a governmental department or highly regarded independent organization which may report to the national government, or on their behalf. If we have low confidence in a source data point, regardless of the general credibility of the source, we carry out a secondary checking procedure to verify or discount the data. We maintain a level of transparency on such issues by providing information on our sources.

Q. What kind of quality control measures do you implement?

A. To ensure the highest quality data possible, quality checks are implemented at every stage of the end-to-end process. We ensure the validity of our data with numerous automated tests, as well as manual checking of data points and overall trends. Additionally, we regularly re-evaluate our modelling logic to ensure we are continually enhancing our understanding of how intelligence on cities should be represented.

Q. How do you ensure consistency in the definitions when your data is from multiple sources?

A. A consistent and robust dataset is of paramount importance. All source definitions are checked thoroughly before the data is extracted to ensure consistency and an estimation approach is implemented if absolutely necessary. To ensure there are no disparities in economic definitions we collect nominal GDP at current prices for each city, and use standardized currency conversions where needed.

Q. How do you overcome gaps in source data?

A. We use a variety of techniques depending on the severity of data availability however, in simple cases, we are able to impute missing values by using linear trend methods, which produces the lowest standard error.

Q. How confident can you be in your data for obscure or less-developed markets?

A. Where we are unsure of the reliability of a data source we ensure figures are aligned with secondary materials. Beyond this, our hierarchical modelling approach enables us to credibly provide estimations for hard-to-research markets.

8.2. Forecasting

Q. How do you forecast your data?

A. Broadly, our principal assumption is that cities are by-in-large becoming independent entities within countries, therefore forecasting of cities should be carried out with a stronger emphasis on their independent nature (or growth). Nonetheless, we still analyze cities within its country limits (for instance, taking into account the historical city's growth contribution to the country). Our forecast method therefore consists of a rigorous framework relevant to the city and data availability at hand, and uses exponential smoothing and linear regression techniques to derive future values. This method removes short-term volatility through dampening, giving an outlook on long-term growth. This long-term outlook is an essential condition given the high degree of estimation in micro data by official sources.

Q. How are your exchange rates forecast?

A. The latest year is estimated by taking into account year-to-date data; while the forecast is derived using International Monetary Fund implied exchange rates.

8.3. Update cycles

Q. How often do you update your data?

A. Our team of Researchers and Analysts follow an annual update cycle, while continually seeking new cities and indicators to add to our coverage.

Q. How do you ensure you are aware of any revised data or new data releases?

A. Our Analysts keep a record of source data cycles to ensure that when a source's data is revised our data set is also updated.

8.4. Coverage

Q. How do you choose your cities?

A. We have chosen our markets based on what is most valuable to clients. This means we cover both the biggest cities and those that are growing and have great potential for the future; it also ensures that we only cover markets where we can be confident in the quality of our data and our ability to provide complete, geographically comparable values.

Q. How do you choose your indicators?

A. To meet our goal of creating the most comprehensive cities database in the market we have selected our indicators based on reliability and depth of the data available, usefulness in making business decisions, and client feedback.

Q. Why do the area definitions of some cities differ?

A. In order to provide the most accurate indication of a city's economy or demographic situation, for example, we will try to collate data for the city proper. If such data is unavailable, or cannot be credibly estimated, we will attempt to use the 'next best' definition, i.e. metropolitan area, metropolitan region, and so on. Improvements to our methodology mean we have now been able to provide data on a city level where we were unable to before.

Q. Why do you not provide data on populations with "No Education"?

A. Due to disparities between definitions of education levels across different countries, and the varying levels of data availability we provide data on those achieving “Less than secondary education.” This allows us to maintain consistency in our taxonomy and provide data with higher confidence.

Q. Why do you estimate GVA structure as opposed to GDP?

Gross Value Added is a more valuable representation of the contribution of a given industry or sector to the total economy. GVA is calculated by removing subsidies and taxes from GDP, factors which may differ significantly, creating false or enhanced figures.

8.5. General data questions

Q. Why are the values in your database different to other sources?

A. The data points that our competitors provide may vary depending on a variety of factors, for instance, there may be a difference in the city area definition, or a different update period, or a different source of data. Our approach is focused on providing the most complete database on cities within the market, which may not necessarily be the same motivation of our competitors, as we strongly believe there is a need to enable comparative analysis across cities (in similar fashion to how countries are analyzed).

If you have any queries or need further information please contact your account manager.

9. APPENDIX

9.1. Complete indicator list

9.1.1. ECONOMY

Nominal GDP (m) – Total (USD, LCU)
Nominal GDP - Annual growth (%)
Nominal GDP - Per capita (USD, LCU)
Nominal GDP - Per capita: annual growth (%)
Nominal GDP - Per km2 (USD, LCU)
Nominal GDP - Per employed person (USD, LCU)
Nominal GDP - Per employed person: annual growth (%)
Nominal GDP (PPP, m) - Total
Nominal GDP (PPP) - Annual growth (%)
Nominal GDP (PPP) - Per capita
Nominal GDP (PPP) - Per capita: annual growth (%)
Nominal GDP (PPP) - Per km2
Nominal GDP (PPP) - Per employed person
Nominal GDP (PPP) - Per employed person: annual growth (%)
Real GDP (m) - Total (2010 = 100) (USD, LCU)
Real GDP - Annual growth (%)
Real GDP - Per Capita (2010 = 100) (USD, LCU)
Real GDP - Index (2010 = 100)
Real GDP - Per employed person (2010 = 100) (USD, LCU)
Real GDP - Per employed person: annual growth (%)
Real GDP - Per km2 (USD, LCU)
Nominal GVA (m) - Total (USD, LCU)
Nominal GVA - Annual growth (%) - Total
Nominal GVA (m) - Agriculture - Total (USD, LCU)
Nominal GVA structure (% of total) - Agriculture
Nominal GVA - Agriculture - Per agriculture employee
Nominal GVA (m) - Industry - Total (USD, LCU)
Nominal GVA (m) - Industry - Construction (USD, LCU)
Nominal GVA (m) - Industry - Manufacturing, mining & utilities (USD, LCU)
Nominal GVA structure (% of total) - Industry - Total
Nominal GVA structure (% of total) - Industry - Construction
Nominal GVA structure (% of total) - Industry - Manufacturing, mining & utilities

Nominal GVA - Industry - Per industry employee (USD, LCU)

Nominal GVA (m) - Services - Total (USD, LCU)

Nominal GVA (m) - Services - Financial, insurance, real estate, professional, scientific, technical, and administrative activities (USD, LCU)

Nominal GVA (m) - Services - Public administration, education, health, and other services (USD, LCU)

Nominal GVA (m) - Services - Wholesale and retail trade, accommodation and food services, and transport, information, and communication (USD, LCU)

Nominal GVA structure (% of total) - Services - Total

Nominal GVA structure (% of total) - Services - Financial, insurance, real estate, professional, scientific, technical, and administrative activities

Nominal GVA structure (% of total) - Services - Public administration, education, health, and other services

Nominal GVA structure (% of total) - Services - Wholesale and retail trade, accommodation and food services, and transport, information, and communication

Nominal GVA - Services - Per services employee (USD, LCU)

Nominal GVA - Annual growth (%) - Agriculture - Total

Nominal GVA - Annual growth (%) - Industry - Total

Nominal GVA - Annual growth (%) - Services - Total

Nominal GVA - Annual growth (%) - Industry - Construction

Nominal GVA - Annual growth (%) - Industry - Manufacturing, mining & utilities

Nominal GVA - Annual growth (%) - Services - Financial, insurance, real estate, professional, scientific, technical, and administrative activities

Nominal GVA - Annual growth (%) - Services - Public administration, education, health, and other services

Nominal GVA - Annual growth (%) - Services - Wholesale and retail trade, accommodation and food services, and transport, information, and communication

Nominal GVA - Annual growth (%) - Agriculture - Per agriculture employee

Nominal GVA - Annual growth (%) - Industry - Per industry employee

Nominal GVA - Annual growth (%) - Services - Per services employee

Prices - Consumer price index (2010 = 100) - Overall

Prices - Annual growth (%) – Overall
